My expectation:
To cut accurate and safely,
and stay a cut above.
My Dahle.

Cutting capacity up to 80 mm																		

Trimmers ...

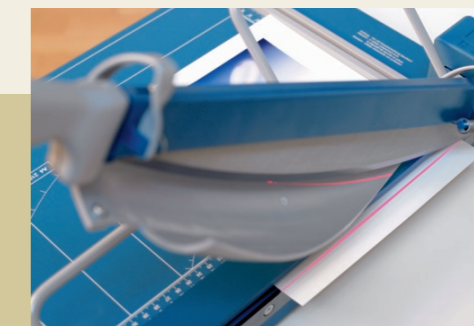

... are used for making long, straight cuts through relatively low material thicknesses (0.8 mm – 3.5 mm) (paper, plastic sheet, special papers, soft card). These trimmers guarantee precision, burr-free cutting results in advertising, graphics, repro studios, in nursery schools, schools as well as in the home. The rotating, self-sharpening circular blade is covered by a plastic cutting head that prevents the user from reaching into the blade unintentionally. As a result, these models offer a maximum of personal safety.

Workshop guillotines & heavy-duty cutters...

... enable the user to perform accurate and relatively long, high-capacity cuts (cutting length up to 1100 mm and cutting capacity of 800 sheets). These workshop guillotines reliably cut material other than paper. Workshop guillotines and heavy-duty cutters, for example, are used in printing shops, schools as well as in handicraft and home decorating shops. Numerous safety features come as standard.

Guillotines

... with ground upper and lower blade are easy to use and allow the user to perform precision cuts with very little effort (cutting capacity between 0.8 mm and 4.5 mm) in different cutting lengths. Mainly used for cutting paper, they can also cope with a wide range of other materials. Ideal for offices, government authorities, workshops as well as service providers and personal use. Optimum safety features, such as the automatic safety guard and metal guard plate as well as ergonomically shaped carrying handles and recessed grips ensure the last word in user safety.
